EMPLOYMENT

Symantec UK
January 2008 - Present

Currently I work for Symantec, one of the world's leading suppliers of Anti-Virus software to both individual consumers and businesses alike. My role is **HTML Developer** for the Partners section, which is catered for globally, in over 13 languages. My main tasks include everyday maintenance of both the customer facing [.com/partners](http://www.symantec.com/partners) site and the registered partner's only portal '**PartnerNet**', **medium/large scale re-designs and content projects**, continual communication with program managers and ongoing support with requestors. Since starting I have become the main liaison for all [.com/partners](http://www.symantec.com/partners) related queries, as I was the content lead on the re-design project.

@UK
September 2006 -
January 2007

Previously I worked for **@UK PLC**, who were the Government's selection to forefront the public sector centralised buying program by providing ecommerce solutions to suppliers of councils, schools and hospitals. My role was HTML Developer and my responsibilities included liaising with customers, **understanding their individual needs** and creating websites based on their requirements. During my time here I have assisted the Design Team, in creating private **web design solutions** and creating standard design templates for ecommerce use.

FREELANCE

NetTeam Consultants
ncl-it.co.uk

Hired by NetTeam Consultants to produce and design a re-imagining of their current website, to bring their company forward with highlighted information and a more prominent use of their brand. The site is currently under construction and is built using a variety of **XHTML, CSS and JavaScript techniques** to create a seamless design that is cross-browser compatible. Although still under construction, the site can be viewed here - <http://www.test.ukspotlight.co.uk/netteam/>

UK Spotlight
ukspotlight.co.uk

My very own Xbox UK Website that I run in my spare time, catering to **over 100 visitors a day** in supplying news, reviews and general Xbox 360 related hearsay. The site itself is part of the Xbox Community Network, is highlight as Xbox Fan site and is supported by several publishers for reviews including EA and Activision. My work on this site includes full design, creation and management, ongoing updates, maintenance of PHPBB Forum and continual contact with PR relations.

Worthy Construction
worthyconstruction.co.uk

Worthy Construction was a real pet project of mine, given the freedom to create from scratch both a **website and branding**. Using a series of techniques I created a non-conformist site for a builder's merchants, which goes against the grain. The Worthy Construction site goes that bit extra to provide users with all the necessary information but in a very useable fashion.

INTERESTS

When I'm not building websites, I enjoy watching & reviewing films, playing Halo 3, taking part in my local 6-a-side league, watching WWE and reading Watchmen.
